Gray Laboratory

Page 2

damaged Davidge Hall as well. The new laboratory building was built on the foundations of Practice Hall and was named Gray's or Gray Laboratory in honor of a former patient who apparently provided a generous bequest. By the 1930s, Gray Laboratory was one of three major lab facilities at the UMD Medical School, the others being the former Dental-Pharmaceutical Building at 31 S. Greene St. and the loft buildings at 34-36 S. Paca St. Gray's labs included Anatomy on the top floor, Pharmacology on the second floor, and Physiology on the first floor. Later and current uses of the building are not known.

Gray Laboratory is now the third-oldest medical school building on the UMD campus (behind Davidge Hall and the original section of the UMD Law School), and is its longest-standing laboratory facility. As such, it is a rare remainder of the university's pre-1900 campus and forms part of a core of the oldest campus buildings. Architecturally, it was a relatively plain building of no particular architectural style or distinction in its original condition. Though it has significance as a longtime laboratory facility, it has lost much integrity due to recent alterations, including replacement of all original windows and doors and installation of new fire escapes. In its modernized state, it does not read clearly as a pre-1900 building, and is recommended not individually eligible for the NRHP. However, it would be a contributing element to the proposed University of Maryland Medical School-Hospital District (B-5128).

B-3583 Gray Laboratory Baltimore accesible/U. Md.

Gray Laboratory, located on the north side of West Lombard Street a few hundred feet northeast of Davidge Hall, is an L-shaped brick building three stories in height. The north-south section which is three stories tall with an elevated basement and six bays wide runs southward along the west wall of the Inner Harbor Loft Apartments. The east-west wing, which is of equal height, is four stories tall and four bays wide and faces the south facade of the Bressler Research Building. The main first story entrance, sided with semicircular transoms, is located at the southeast corner of the south facade of the east-west section. Flanking fenestration is characterized by 6/6, double-hung sash, framed by an architrave surruond and projecting brick sills.

The north-south section possesses 9/9 double hung windows on first and second stories and is distinguished by a corbeled brick cornice.

Gray Laboratory, was built to replace on the site of the second oldest Medical School building, Practice Hall, a victim of fire, which was built in 1820 as an adjacent facility to Davidge Hall, containing classrooms and anatomical laboratories.

DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

Gray Laboratory, located on the north side of West Lombard Street a few hundred feet northeast of Davidge Hall is an L-shaped building dating from the 1890s. The north-south section which is three stories tall with an elevated basement and six bays wide runs southward along the west wall of the Inner Harbor Loft Apartments. The east-west wing which is of equal height is four stories tall and four bays wide and faces the south facade of the Bressler Research Building. A small rectangular grassy courtyard exists between Davidge Hall and the Gray Laboratory.

The main first story entrance is located at the southeast corner of the south facade of the east-west section. This arched entrance is characterized by a set of double doors surmounted by a semi-circular transom. The wooden doors have four-light, glass panels above the lock rail. The transom is broken into six wedge-shaped glass panels and outlined by an architraved surround. In the remaining three bays of the first story are windows with 6/6 double-hung sash and framed by an architraved surround and projecting brick sills.

The second and third stories are characterized by 6/6 double-hung sashed windows in the corresponding openings. The windows of the third story are slightly smaller than the first story windows. Fenestration on the second story, however, is identical.

The attic level is distinguished by four square windows with six-light fixed sash. These window openings also carry a projecting brick sill.

The cornice consists of several rows of corbeled brick.

The west facade of the north-south section is composed solely of windows. The basement level, which rises several feet above street grade, is defined by small square windows with narrow wooden sills.

Windows with 9/9 double-hung sash occupy the six openings of the first, second and third stories. Each window is framed by a wooden surround with a slightly projecting wooden sill.

Several rows of corbeled brick crown this section. A chimney rises above the north facade.

BUILDER/ARCHITECT

STATEMENT OF SIGNIFICANCE

The following information was gathered by Architectural Conservators, Ltd., in March 1977 for their historic structures report on Davidge Hall. This twovolume report included programs for restoration, estimates of cost, recommendations, and an architectural and historical sketch of the building itself.

The second accompanying building to Davidge Hall was completed early in 1821 urged along by the spirited backing of Granville Sharp Pattison. It was described in 1820 as 64 feet by 35 feet and on ground level included a classroom, and some anatomical rooms. On the second floor it housed Pattison's museum, mainly specimens of morbid anatomy purportedly left to him by the famous doctor, Allen Burns 43 from Glasgow. In an adjoining room there was a museum of geology and minerology. This anatomy museum was a great success for many years containing as it did that famous foreign collection of such an intriguing nature. Later the building became known as Practice Hall for obvious reasons. A third story and a wing were added after a disastrous fire in December of 1893, spread from the Heiser Building, completely burning Practice Hall. As a result of the spreading flames a large hole was burnt in the dome of Davidge Hall; the resulting water damage caused the ceiling in Chemical hall to deflect seven inches (still apparent) 44. This new building built on the foundations of Practice Hall was named Gray's Laboratory for a former patient and a generous legacy.

43 George H. Callcott, A History of the University of Maryland. p. 40. 44 Margaret Byrnside Ballard, A University is Born. (West Virginia: Old Hundred Union). Balto., Garamond), 1965. p. 154. E.F. Cordell, Historical Sketch. p. 42.

Gray Laboratory is significant not only as a good example of 1890s institutional architecture but also as the site of the second building constructed by the medical college.

Gray Laboratory thus holds both architectural and historical importance in the development of University of Maryland's campus at Baltimore City.
